Front End Analytics uses EASA to create applications which simplify, accelerate, and automate various CAD/CAE processes

Front End Analytics use EASA to build highly tailored Smart Product Generators (SPGs) for their customers. Companies typically use SPGs to either gain efficiency within product development organizations or to leverage product creation expertise across the enterprise.

Typical usage includes:

- Product Development
 - Product Generators
 - Configuration
 - Product Variants
 - Derivative Designs
- Sales and Marketing
 - Proposal Generation
 - Product Pricing
 - Engineering To Order (ETO)

Click the links below for more details and sample videos of various usage:
